4/28/77

Dear A.I.,

Once again thanks for your mailing of 4/26 and the Hunt, de M and Shaw stories.

I'm disappointed that Earl Golz was not as considerate. I gave him that story.

Here is how it happened:

He phoned me after his Bell and Harbison stories appeared.

I told him to look under Shaw in the index to Whitewash and he'd see what Shaw testified to and believed.

And this is what he asked Shaw about and Shaw told him about.

While they were under great pressure, especially Perry, the Dallas doctors were either entirely or basically honest. In their testimony re Connally completely honest.

Shaw and Gregory were asked about the single-bullet theory of Specter's. They did not go for it. So he substituted a hypothetical case instead, eliminating the condition of the Bullet 399. This is what he used in the Report as though it were what Shaw and Gregory testified to.

Appreciate your sending these clips, much.

Thnaks and best wishes,
